

HP printer in Printers section and select See what

Posted by jack0013 - 2020/07/04 05:17

Printer won't print is a common issue for HP printer users. This issue can result from various reasons, from connectivity issues to faulty configurations or drivers. If you are struggling to find a good fix, you can give the methods as follows a try. They can help you fix your HP printer won't print problem.

- 1) Perform basic troubleshooting
- 2) Update printer driver
- 3) Set your printer as default
- 4) Cancel all print jobs hp printer not working
- 5) Check printer status

1) Perform basic troubleshooting

You can do some troubleshooting at first when you find your HP printer stops working. You should check the status of the connection between your printer and your computer. Make sure your devices are properly connected with each other, and the network or the cable you use to connect these devices is normal.

You can also try restarting your HP printer. Turn it off completely and unplug the power cord, leave it for a couple of minutes, and then plug the cord back and power on the printer. See if your printer can print as normally as before.

2) Update or reinstall printer driver

In many cases, printer won't print issue comes from faulty drivers. You may need to update or reinstall printer driver to fix your HP printer not printing issue.

One easy and credible way to deal with drivers is to use Driver Easy.

Driver Easy will automatically recognize your system and find the correct drivers for it. You don't need to know exactly what system your computer is running, you don't need to risk downloading and installing the wrong driver, and you don't need to worry about making a mistake when installing.

You can download and install your drivers by using either Free or Pro version of Driver Easy. But with the Pro version it takes only 2 clicks (and you get full support and a 30-day money back guarantee):
